

We receive a lot of inquiries at Palm-Tech about installing our mobile software to smartphones. We understand that phones are the latest new productivity tool out there, and Palm-Tech by all means will work on a smartphone however there are a few things to keep in mind.

Software compatibility

There are hundreds of different makes and models of smartphones out there, however Palm-Tech is not compatible with each and every one of them. A few of the more common ones we get asked about are the BlackBerry, Droid and iPhone. Palm-Tech is not compatible with any of them, because they are not running Windows Mobile.

In order to run Palm-Tech your smartphone has to meet two different criteria: it **must have a touchscreen** and it **must be running Windows Mobile 5.0 or later**.

Here are a few examples of phones that will work with Palm-Tech. These phones and their carriers reflect the North American market, if you are in Canada or any other country you will want to check your local carriers.

AT&T
HTC Tilt 2

Sprint
HTC Touch Pro 2

Verizon
HTC Imagio
Samsung Omnia 2
LG Fathom

T-Mobile
HTC HD2
HTC Touch Pro 2

There are more devices out there that run our software, however these are the most recent as of 2010. Also note that you may be required to update your Palm-Tech software to 6.06d before installing to your phone.
